Technical Specification 7-6020-F 2007-05-04

Sandvik DL430-7

APPLICATION

The Sandvik DL430-7 is the most flexible electrohydraulic longhole drilling rig for production drilling in underground mines. The rig is capable of drilling 64-102 mm ($2 \frac{1}{2}$ " -4") holes up to 40 meters.

The rig has been designed for large vertical and horizontal coverage. The ZRU 1408R boom has wide parallel drilling coverage, long boom extension, 360° rotation and wide tilt angle ranges forward and backwards, thus offering wide drilling variety.

Instrumentation options allow maximum performance with superior drilling accuracy. Built in and proven CAN-based technology on board allow operator to set the unit for any rock conditions. The CAN technology also makes the upgrade of automation level easy. The control system has a sophisticated fault finding system, which enables minimum downtimes.

The unit is based on a proven jumbo carrier for high mobility. Both drilling and tramming are done from the operator's platform.
